PRESENTER GUIDE

Build Your AI Project Manager

Slide-by-slide speaker notes and facilitation cues — ~2 hours, hands-on, code.

Before you start

- A day ahead, send the setup as an entry ticket: install Ollama, 'ollama pull llama3.1', and 'pip install crewai crewai-tools pydantic'. The 4.7 GB pull will not finish on venue wifi.
- Pre-run pm_crew.py and virtual_office.py on your machine; keep the output to show if laptops stall.
- Have the finished code ready to paste, and a small model (llama3.2:3b) ready for weak laptops.
- Confirm your own Ollama is running before slide 10 (test: 'ollama run llama3.1').
- Hard stop after slide 17. The intermezzo is your flex time if you're behind.

Slide-by-slide

Part 1 · Welcome & setup 0:00 · 8 min

Slide	What to say / key point	Cue
S1 Title	Welcome. By the end you'll have built AND run an agentic project manager — real code, local models.	1 min; confirm everyone pulled the model
S2 About me	I build production agent systems — CrewAI, LangGraph, multi-agent.	1 min; establish credibility
S3 Agenda	Understand agents, build one, then scale it to a virtual office.	1 min

Part 2 · What we're building 0:08 · 5 min

Slide	What to say / key point	Cue
S4 The goal	Here's the finished assistant: a brief goes in; tasks, risks, and a status update come out — all running locally.	Point at the terminal output; promise they'll build it

Part 3 · How agents work 0:13 · 25 min

Slide	What to say / key point	Cue
S5	First, what an agent actually is.	Transition

Divider		
S6 Anatomy	An agent is just an LLM wrapped with tools, memory, and a loop. No magic.	De-mystify; this frames everything
S7 ReAct loop	Think → act (call a tool) → observe → repeat until done. CrewAI runs this loop.	THE core idea — slow down here
S8 One vs. a crew	One agent for one job; a crew of specialists for complex work. Sequential or hierarchical.	Sets up both the build and the intermezzo
S9 Local stack	All open-source, all local: CrewAI → LiteLLM → Ollama → Llama/Qwen. No keys, no data leaving.	Reassure on privacy and cost

Part 4 · Build the PM assistant 0:38 · 45 min

Slide	What to say / key point	Cue
S10 Divider	Let's build. Editors open, model running.	Confirm Ollama is up before coding
S11 Setup	Install Ollama, pull a model, pip install crewai. Pin versions.	~2 min; most did this beforehand
S12 First agent	Agent + Task + Crew, pointed at Ollama. Run it live.	Run it; show the real output
S13 A tool	Tools are just functions. Attach with @tool; the agent decides when to call it.	Show save_tasks writing the JSON file
S14 PM flow	The shape: brief → planner / risk / writer → outputs + shared state.	Orient before the next code slides
S15 Typed output	Pydantic output so the next agent can trust the data — no prose parsing.	Senior crowd will appreciate this
S16 Specialists	Add a risk analyst and a status writer; pass context between tasks.	One job per agent; keep goals sharp
S17 Run the crew	Wire three agents into a sequential crew; run on a real brief.	THE payoff. HARD STOP here if behind

Intermezzo · The virtual office 1:23 · 15 min

Slide	What to say / key point	Cue
S18 Divider	Now scale it: one assistant becomes a team.	Transition; this is the NexaPaw-style office
S19 NexaPaw office	This is my NexaPaw office: every Claude Code role is an agent; a CEO & CTO sit above project leads who run specialist teams — 65 agents, visualized live in a 3D HQ.	Show the 3D office / repo if you can
S20 Hierarchical	Add a manager, switch to Process.hierarchical. You define staff, not steps.	Run virtual_office.py
S21 Trade-off	Powerful, but more agents = more model calls = slower and more nondeterministic.	Be honest about local latency

Part 5 · Make it real 1:38 · 15 min

Slide	What to say / key point	Cue
S22 Divider	Last part: make it trustworthy.	Transition
S23 Guardrails	Validate outputs, cap iterations, keep send / pay / delete behind a human.	Emphasize before anyone ships this
S24 Observe & cost	Log everything, trace tokens and latency, evaluate on a test set.	Senior-relevant ops reality
S25 Responsible	Least privilege, local-first for PDP Law, watch prompt injection, human on people-decisions.	Tie to Indonesian regulation

Part 6 · Recap & discussion 1:53 · 7 min

Slide	What to say / key point	Cue
S26 Recap	The whole build in seven lines.	Read through; pause on each
S27 Discussion	What project chore would you hand an agent crew first?	Open floor; use the two prompts if quiet
S28 Close	Thank you — code and links are on screen.	QR; point them to the code bundle
