BEFORE YOU ARRIVE

Pre-Workshop Setup

Build Your AI Project Manager · 11 November 2026 · ~20–30 min · finish this days before the session

The session is 2 hours and goes straight into code — there is no time to install things on the day. Please arrive with the steps below done and verified.

THE ONE THING THAT CAN'T BE RUSHED

Install Ollama and run ollama pull llama3.1 (~4.7 GB). This download can take hours on a slow connection — start it days ahead, not on the day.

Install & verify (tick each one)

☐ A laptop you can install software on — 8 GB RAM minimum, 16 GB recommended; admin rights. Apple Silicon or a discrete GPU runs the models much faster.

☐ Install Ollama from ollama.com (macOS / Windows / Linux)

☐ Pull the model: `ollama pull llama3.1` (weak laptop? also: ollama pull llama3.2:3b)

☐ Python 3.10 to 3.13 (3.14 won't work): `python --version` (macOS: python3 --version)

☐ Get the code: `git clone https://github.com/felixyustian/ai-pm-workshop` then `cd ai-pm-workshop/MurzEdu_AI_Workshop_Package/04_Code` (no git? unzip MurzEdu_Workshop_Code.zip and open that folder)

☐ In that folder, create a venv: `python -m venv .venv && source .venv/bin/activate` (macOS: start with python3. Windows: python -m venv .venv, then .venv\Scripts\activate)

☐ Install the framework: `pip install -r requirements.txt`

☐ Check everything: `python check_setup.py` → says `ALL GOOD`

☐ Recommended smoke test: `python pm_crew.py --brief brief.md` → writes project_state.json

Weak laptop? Mac/Linux: export WORKSHOP_MODEL=ollama/llama3.2:3b · Windows PowerShell: $env:WORKSHOP_MODEL="ollama/llama3.2:3b"

Have ready for the session

- Laptop plugged in (local models drain the battery fast), and stable internet for the video call.
- A code editor (VS Code or your preference). A second screen helps you watch and type.
- Close other heavy apps, and turn your camera off during runs: the model and the call share your laptop's memory.
- Optional: a real project brief of your own to point the assistant at.

Tell the organizer ahead of time if…

- You don't have admin rights to install software on your laptop.
- Your laptop has under 8 GB RAM or is quite old — you can watch the live runs and try the code afterward.

If you only do one thing: install Ollama and pull llama3.1. Everything else takes a few minutes; that download does not.
